C A D Design

Sheet Metal

Ideation

Portfolio

3dcraft specialize in reproducing 2D drawings to produce quality solid models and photo realistic renderings of various products ranging from single body components such as moldings and castings to consumer products, structures, machinery and tools.

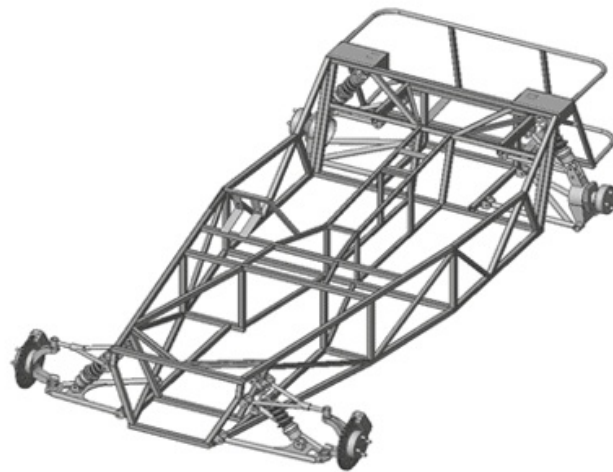

Our experience includes:

Design for manufacture
Design drafting services
2d drawing conversion
3d modeling
3d sheet metal development
Creative/promotional imagery
Product design/realization
Concept generation/development

Because we are experienced in large scale **3d assemblies**, we can test in detail the fit and functionality of all components within an assembly and **rectify potential clashes** before production, this proved extremely useful on a recent close fit pipework project!

[view portfolio here](#)

- we can work from an initial concept sketch to develop an idea, or we reproduce 2D drawings such as **AutoCAD** files and turn them into usable, accurate solid body, 3D models
- we produce high quality **3D models**, drawings and renderings for company literature and advertising material.
- if you have 2D drawing information but require high quality images to **communicate an idea instantly**, or simply wish to check the fit/function of multi body components or assemblies, then 3d craft can help.

3d craft offer competitive hourly rates, with projects ranging from a concept generation session of a few hours, to complete bespoke design solutions.
